

For All: Piping Designers, Structural Engineers, Electrical Engineers, Project & Procurement Managers involved with **detailed engineering of Power Distribution and Arduous Industrial Projects.**

Strutfast is pleased to introduce the innovative modular support system Framo, which is a patented, fully certified non-welded steelwork support system for the modular construction of frames and structures according to EN1090. Framo allows multidirectional connection possibilities without the need for through-bolts and back-plates. The box section profiles have a high torsional resistance and a fine adjustment capability for connecting members and is suitable for a wide variety of structural support applications in arduous situations. The fully modularised system is perfectly suited for sites where transportation of structures is a challenge, on site welding is costly and high levels of flexibility are required.

Benefits Summary

Applications

- ✓ Ladder Supports
- ✓ Roof Top Supports
- ✓ Industrial & Process pipe supports
- ✓ Skid Units
- ✓ M&E Services

Consultant

- ✓ Improved level of plant detail
- ✓ Opportunity to inject innovation
- ✓ Support from external engineers
- ✓ CAD Library
- ✓ Design Software

Contractor

- ✓ Approx 50% lighter than traditional steel
- ✓ Built-in adjustability
- ✓ No hot works
- ✓ Quick delivery
- ✓ Engineering Support
- ✓ Hot Dip Galvanised
